Babel Fish Temporary Mid-Probe Centralizer Change
Revision 1

Date: May 10, 2024
Applicability: Babel Fish
Issued By: Jack Rader
InTouch:

BACKGROUND INFORMATION

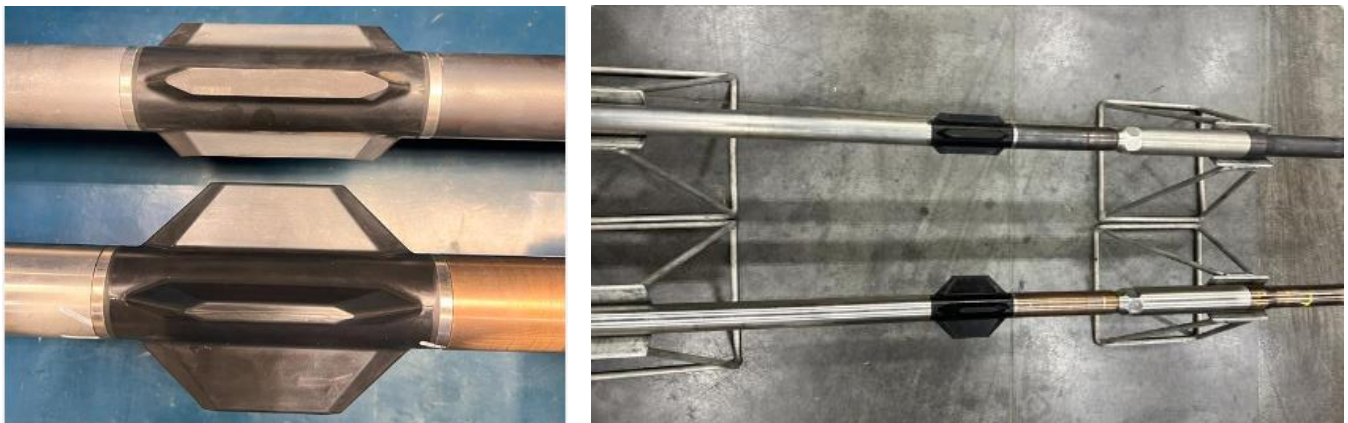

Due to a change in our remolding process mid-probe centralizers measuring 2.815" will be distributed during the transition. The location is highlighted below.

The 2.815" size mid-probe centralizer was run successfully for several years before an update was made to increase the size to allow it to be custom cut to fit the ID of the collar. This was done to in an attempt to reduced shock and vibration across the antenna.

EXAMPLES

Below are examples of a full size vs reduced sized centralizer.

MOVING FORWARD

This is a temporary distribution that will be reverted to full size centralizers when as soon as possible. Until then, the smaller size does not require trimming in most circumstances and is appropriate for use in collar sizes 2.815" and above.
